

Offensive Advance Scout: the Phillies lineup vs Chris Sale (LHP)

NL Wild Card Series, Game 1 · Philadelphia @ Atlanta · Truist Park · 2026-09-29 · 2:00 p.m. ET (NBC)

Prepared for: manager, hitting coach, advance meeting. One page per hitter, one page on Sale, one rule to carry into the dugout.

Opponent starter: Chris Sale, LHP (ATL), MLBAM 519242 · 27 starts in 2026, last on 2026-09-23

Governance: Use Case #50 (uc-pos-018, build dp_uc50). Lineage uc-pos-001 (Phillies vs Wacha, the first lineup-vs-starter card) → this. KPIs are inherited by import, not copied: dp_uc44_kernel (nresults, whiff, chase, hard-hit), dp_uc46_kernel (certified directional family), barrel_rate.py, dp_uc48_kernel (xwOBAcon). New and provisional: XW-1 (PA-based xwOBA), HL-1 (inner/middle/away band), LR-1 (your Harper rank, generalised), TT-1 (time through the order). DQ 15 PASS / 2 WARN / 0 FAIL.

⚠ **Read this first: data window and sample sizes.** • Regular season only, 2015 through Game 162 (2026-09-27). Hitters are locked by MLBAM id across the Phillies log and every MLB opponent file, with precedence dedup (378,334 rows → 360,327). No postseason or spring PA vs Sale exist for these nine.

- Head-to-head samples are small by nature: the biggest book is 27 PA. **PA is printed on every line; THIN = under 10 PA, directional only.** Where it matters, xwOBA is the number doing the work, not wOBA.
- Sale's 2025 is PARTIAL in this repo (sale.parquet ends 2025-05-23). His profile here is 2026 only, which is complete.
- Carry-ins, never computed on: batting order (your prompt), game time and network (MLB.com / NBC listings), Harper's quote (your notebook).

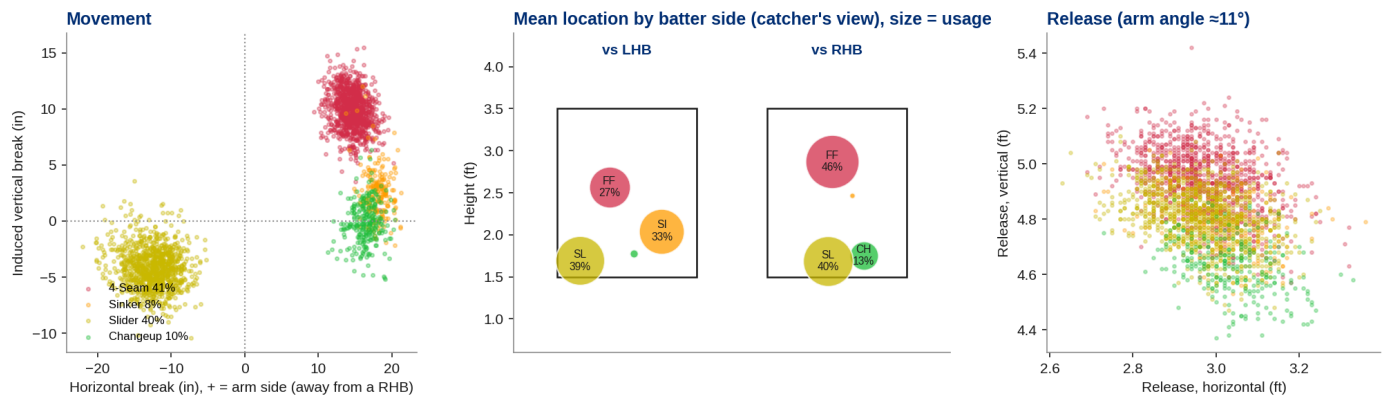

Bottom line

1. **Sale is the 2026 version of Sale, and a little harder.** Sale in 2026: 27 starts, 650 PA, .258 wOBA, .267 xwOBA, 30.8% K, 4.8% BB. Four-seam 96.1 mph (+1.3 over 2024). Slider 40% of pitches, 38% whiff, .228 wOBA.
2. **The lefties can't be the plan.** The lefties have 1 hit in 2026: LHB vs Sale 24 PA, .066 wOBA. Career LHB .217 in 52 PA. Harper's .190 career OPS makes Sale the toughest of the 20 lefties he's seen 20+ times.
3. **The right side carries the offense.** The righties have done the work: RHB career .278 wOBA in 111 PA, 2026 .289 (.332 xwOBA). Bohm is the best bet on the card (25 PA, .365 wOBA). Turner (.323) and Hill (hard contact in a thin book) follow.
4. **Don't count on the order turning over.** No third-time relief: .262 / .254 / .258 wOBA the 1st / 2nd / 3rd+ time through. Getting to him early is no easier than later. What does change the 3rd time through is the HR rate (1.2% → 2.4%).
5. **The rule: make the slider a ball.** The slider is 40% of what he throws, with a 38% whiff rate and a .228 wOBA against. The four-seam is where the damage is: 96.1 mph, .285 wOBA, 27% whiff. Every hitter's plan below is a version of *hunt the heater in the zone, let the slider go*.

1 · Chris Sale, 2026

Chris Sale, 2026: the arsenal (27 starts, 2,575 pitches)

FF 96.1 mph · SL 38.2% whiff · SI 18.0 in of run · CH 30.3% whiff (your subtitle, governed)

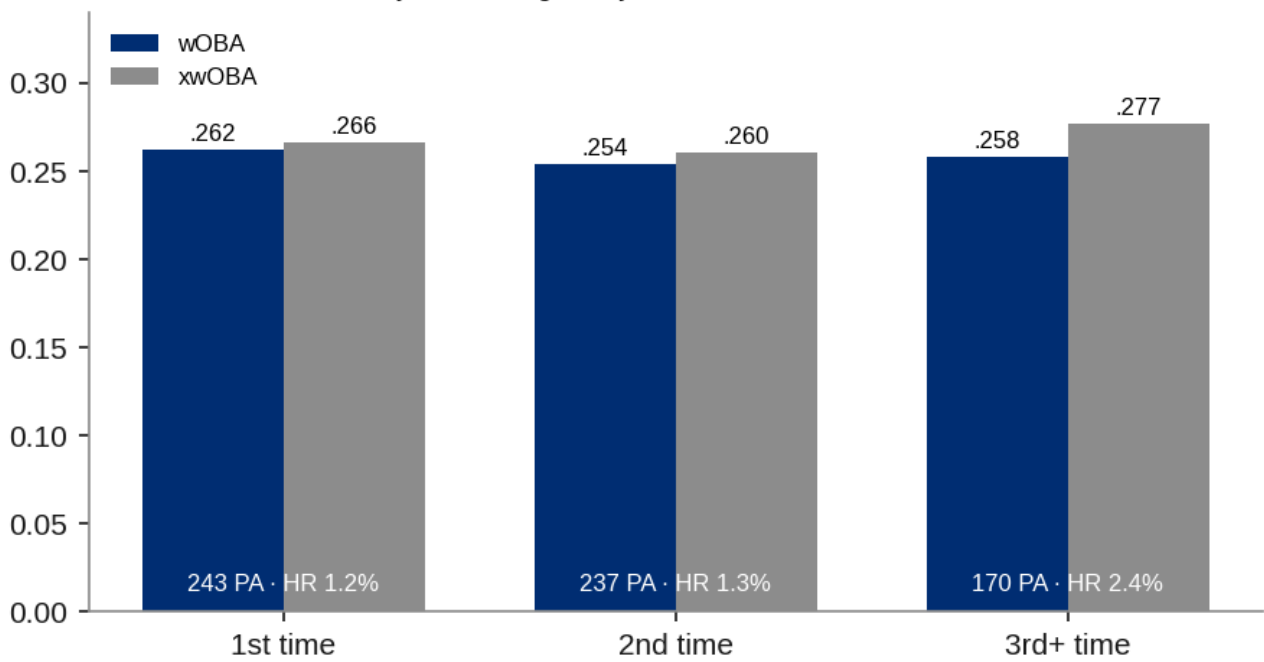

vs	Pitch	Usage	Velo	Whiff%	Chase%	wOBA	xwOBA	PA ended
LHB	Slider	38.6%	80.0	44%	39%	.239	.187	65
LHB	Sinker	32.9%	95.5	9%	39%	.277	.287	51
LHB	4-Seam Fastball	27.2%	96.9	32%	38%	.298	.238	44
RHB	4-Seam Fastball	45.9%	96.0	27%	32%	.283	.311	215
RHB	Slider	40.3%	79.7	36%	37%	.225	.224	204
RHB	Changeup	13.3%	88.5	30%	41%	.275	.318	67

By side: LHB .264 wOBA / 33% K in 162 PA; RHB .256 / 30% in 488 PA. Lefties see a slider-sinker pitcher and righties see a four-seam-slider pitcher, with the changeup almost only for righties.

Sale does not fade through the order (2026)

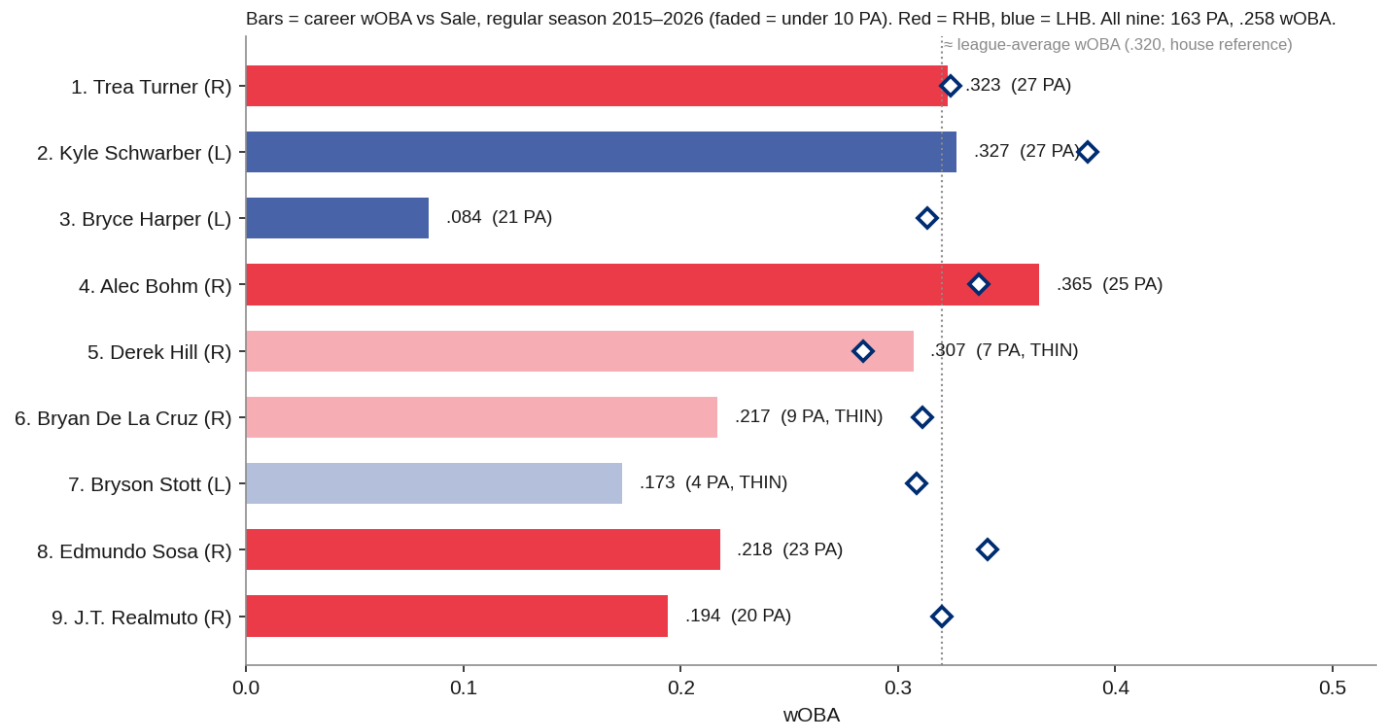

wOBA flat at .25–.26 every time through; only the HR rate moves.

Four 2026 starts against Philadelphia: 99 PA, 04-18 .243, 04-26 .137, 09-04 .362, 09-11 .199 wOBA by start.

2 · The lineup card

The lineup vs Chris Sale: career head-to-head (bars) and 2026 xwOBA vs all LHP (◇)

#	Hitter	Bats	2026 vs LHP PA	wOBA	xwOBA	vs Sale PA	AVG/OBP/SLG	wOBA	K%	Sale rank (LR-1)	Read
1	Trea Turner	R	235	.275	.324	27	.280/.333/.400	.323	26%	#4 of 15	Unlucky against lefties, and the soft stuff is the leak
2	Kyle Schwarber	L	258	.389	.387	27	.200/.259/.520	.327	37%	#5 of 9	Career damage, 2026 silence
3	Bryce Harper	L	268	.299	.314	21	.095/.095/.095	.084	52%	#1 of 20	The one pitcher he hasn't solved
4	Alec Bohm	R	193	.351	.337	25	.304/.360/.478	.365	24%	#4 of 8	The matchup bat: contact that Sale hasn't beaten
5	Derek Hill	R	138	.328	.284	7 THIN	.286/.286/.429	.307	14%	— (7 PA < 20)	Fastball or nothing
6	Bryan De La Cruz	R	41	.288	.311	9 THIN	.125/.222/.250	.217	44%	— (9 PA < 20)	The slider test
7	Bryson Stott	L	145	.325	.309	4 THIN	.000/.250/.000	.173	0%	— (4 PA < 20)	A results rebound without the damage
8	Edmundo Sosa	R	138	.358	.341	23	.190/.261/.190	.218	35%	#1 of 2	A lefty masher Sale has figured out
9	J.T. Realmuto	R	123	.261	.320	20	.111/.200/.222	.194	35%	#4 of 15	Hitting it at people, not over them

LR-1 rank: 1 = the lowest OPS among LHP the hitter has faced 20+ times (your Harper cut). All nine vs Sale, career: 163 PA, .199/.258/.325, .258 wOBA.

126 PA

Your read holds on results: .275 wOBA against lefties in 235 PA. The contact says otherwise (.324 xwOBA), so part of it is luck. The real leak is spin. Against LHP breaking balls he has a .218 wOBA, and against changeups .212. The pull habit sits on the inner third (65% pulled), where it pays (.336). On away pitches he already goes the other way more than he pulls (37% oppo, 31% pull). Those balls are simply weak (.241).

SALE vs Sale: 27 PA, .280/.333/.400, .323 wOBA / .334 xwOBA. Sale ranks #4 toughest of 15 LHP he's seen 20+ times.

PLAN Sale shows righties the four-seam 46% of the time. Hunt it in the zone. The changeup (13%) runs away, and that away ball is his weakest contact. Let it go.

2026 vs LHP: where the pitch was → where the ball went

	Pull	Straightaway	Oppo
Away third 68 BIP · .241 wOBA	31%	32%	37%

.358	.341	.218	.190/.261/.190	.464
138 PA	K 20%	23 PA		37 PA

On paper he's in the lineup for this: .358 wOBA and .829 OPS against lefties in 2026. He's also hot (.464 wOBA, 37 PA in the last 30 days, though the contact grades .323). Sale has figured him out anyway: 23 PA, .190/.261/.190, 35% K. The reason is the chase. He swings at 48% of lefties' pitches out of the zone, including 58% of changeups (2024–26).

SALE Of the 2 lefties he's seen 20+ times, Sale is #1, the tougher one.

PLAN Sale's changeup is 13% of what he throws righties, with a 41% chase rate. Make him throw it for a strike. Fastball in the zone, or take.

What he hits from lefties vs what Sale throws him

uc-pos-018 · dp_uc50 · regular season · receipts out/dp_uc50_*.csv · * = under 25 BIP (FL-1)

On paper he's in the lineup for this: .358 wOBA and .829 OPS against lefties in 2026. He's also hot (.464 wOBA, 37 PA in the last 30 days, though the contact grades .323). Sale has figured him out anyway: 23 PA, .190/.261/.190, 35% K. The reason is the chase. He swings at 48% of lefties' pitches out of the zone, including 58% of changeups (2024–26).

Sale. Of the 2 lefties he's seen 20+ times, Sale is #1, the tougher one.

Plan. Sale's changeup is 13% of what he throws righties, with a 41% chase rate. Make him throw it for a strike. Fastball in the zone, or take.

9 · J.T. Realmuto (R): Hitting it at people, not over them

91 PA

The line against lefties is his lowest in 12 seasons (.261 wOBA, .562 OPS, 123 PA). The contact is better than that (.320 xwOBA). What's gone is lift: 2% barrels. Against LHP four-seams and sinkers he has 0 barrels in 74 PA. Last 30 days: .209 wOBA on .299 xwOBA.

SALE vs Sale: 20 PA, .111/.200/.222, .194 wOBA. #4 of 15 LHP for him.

PLAN Ninth, turning the lineup over. Get on base in front of Turner. A walk or a single up the middle is the job.

The line against lefties is his lowest in 12 seasons (.261 wOBA, .562 OPS, 123 PA). The contact is better than that (.320 xwOBA). What's gone is lift: 2% barrels. Against LHP four-seams and sinkers he has 0 barrels in 74 PA. Last 30 days: .209 wOBA on .299 xwOBA.

Sale. vs Sale: 20 PA, .111/.200/.222, .194 wOBA. #4 of 15 LHP for him.
Plan. Ninth, turning the lineup over. Get on base in front of Turner. A walk or a single up the middle is the job.

4 · The single attack rule

Make the slider a ball and the four-seam a strike. Sale's slider is 40% of everything and his best pitch. Most of this lineup's damage against lefties comes on fastballs. Win the take, then win the heater.

Game-plan takeaways

- 1. **Stack the right side in the middle innings.** Bohm, Hill and De La Cruz bat 4–6 and Sosa 8th. Late pinch-hit decisions should protect that platoon edge, not undo it.
- 2. **Harper and Schwarber: the walk is the win.** Both chase Sale's slider below the zone. A long at-bat in front of Bohm is worth more than a swing at a 1-2 slider.
- 3. **Sosa: no changeups.** His chase against lefties is the whole Sale problem. A strike or nothing.
- 4. **Turner: take the changeup away.** His away-pitch contact is his weakest. The four-seam is 46% of what Sale throws righties, so wait for it.

5. **Don't wait for the third time through.** Sale's results don't fade. If the Phillies are going to score off him, it'll be on fastball mistakes whenever they come.

5 · Your notebook, graded

#	Subject	Your claim	Your value	Your method, today	Governed	Verdict
HP-01	Turner	vs LHP 2026 'pretty bad'	(woba/ops printed, not quoted)	wOBA .266 / OPS .581 / 249 PA	wOBA .275 / xwOBA .324 / 235 PA	HOLDS on results; process is league-average
HP-02	Turner	AIR% on pulls	44%	43.0%	43.0%	HOLDS; value moved to 43.0%
HP-03	Turner	Line-drive rate, straightaway	30%	28.8%	28.8%	HOLDS; value moved to 28.8%
HP-04	Turner	BA on balls hit oppo	.196	.192	.192	HOLDS; value moved to .192
HP-05	Turner	'Too many pulls on pitches away from him'	(narrative)	—	Away-third BIP: pull 30.9%, oppo 36.8% (n=68); inner-third pull 64.9%	DOES NOT HOLD as worded
HP-06	Schwarber	.327 wOBA / .779 OPS / 27 PA / .520 SLG	.327 / .779 / 27 / .520	.327 / .779 / 27 / .520	.327 / .779 / 27 / .520	REPRODUCED
HP-07	Schwarber	'1 in 5 BIP a barrel; less than half hit hard'; '5 career hits'	20% / <50% / 5	20.0% / 46.7% / 5	20.0% / 46.7% / 5	REPRODUCED
HP-08	Harper	'.100 OPS vs Sale, BY FAR the worst of LHP with 20+ PA'	.100	.190 (next worst .538, n=20)	.190 OPS, rank 1 of 20 (next worst .478)	HOLDS in direction; value corrected
HP-09	Sale	Subtitle: FF mph / SL whiff / SI run / CH whiff	(computed in cell)	96.1 mph / 38.4% / 18.00 in / 30.3%	96.1 mph / 38.2% / 18.0 in / 30.3%	REPRODUCED with one rounding note
HP-10	Sale	name-filtered 2026 frame is complete	(implicit)	2565 pitches	2575 pitches	O-26 EXPOSURE
HP-11	Sosa	vs Sale (cell 137 output)	23 PA / .451 OPS / .218 wOBA	23 PA / .451 / .218	23 PA / .451 / .218	REPRODUCED
HP-12	Hill	2026 barrel rate (cell 152)	.108 (14/130)	.108 (14/130)	.105 (14/133)	REPRODUCED (client method); governed differs by 3 BIP

Notes: HP-01 your frame (po26) keeps spring and exhibition rows, and the governed frame is regular season. HP-05: the away pitch is where Turner's contact is weakest, but he isn't pulling it. The card says what holds instead. HP-08: '.100' does not reproduce from either frame today, and the ranking claim stands. HP-10 is O-26 again: a `nph1` name filter drops Sale pitches that were deduped into an earlier batter-keyed file.

6 · Candid caveats

- **Head-to-head is small.** 163 PA across nine hitters and four seasons. Every H2H line is directional. The cards lean on 2026-vs-LHP process (xwOBA, whiff, chase) and on pitch-group splits because those samples are 10–20× larger.

- **Pitch groups are a proxy for Sale.** 'Breaking balls from lefties' mixes many sliders and curves with Sale's 80-mph sweepy slider. Directional, not a Sale-shape comp.
- **HL-1 thirds are house geometry** (± 0.28 ft on a ± 0.83 ft plate). Cells under 25 BIP are marked * (FL-1) and are never quoted in the text as findings.
- **Coverage.** De La Cruz's non-Phillies 2025 is outside the repo (bdlc.parquet ends 2025-04-16). Sale's 2025 after 5/23 is present only against the Phillies. Neither changes a 2026 number.
- **Not modelled:** park, weather, bullpen usage after Sale, catcher framing, or the umpire.
- **Receipts:** `out/dp_uc50_*.csv` (every table), `out/dp_uc50_headlines.json` (every number in the prose), `dp_uc50_verification.py` (independent recompute). Governance trail: `Agents for Data Products/data-products/uc-pos-018-lineup-vs-sale-wc-g1-001/`.
